Yes, a lot of concepts apply to both. Setting enforceable synthetic minor limits in particular is a good subcategory to cover. While it's a basic topic, it still comes up as an issue in permits. It also has particular relevance now as sources apply to switch from major MACT to area sources.

I think that there may be two categories- Synthetic limits and BACT/LAER/RACt limits? But maybe it could be the same. The attachment focuses on synthetic limits.
